

Instructions for semen sample collection

- ❖ please avoid sexual intercourse 2 to 3 days before collecting the semen sample for bacteriological analysis
- ❖ the penis is to be cleaned shortly before collecting a semen sample
A semen sample is to be contained in a sterile container.
- ❖ a semen sample must be delivered to the hospital in the shortest time, no later than 1 hour after the sample collection
- ❖ samples are received at Special hospital AGRAM – Zagreb Polyclinic, Trnjanska cesta 108, Urology outpatient clinic, between 7 and 8 AM on working days, expect for Saturday

If a semen sample analysis is accompanied by urine analysis (urine culture test), follow these instructions:

- ❖ release urine in a sterile container for the urine culture test, following the above mentioned instructions
- ❖ collect a semen sample in another sterile container.
